

Project Profile

Hydro One Networks Field Offices ON, Canada

Situation

Hydro One Networks, an electric utility servicing the Ontario market, required space to be used as field offices situated in remote locations across Ontario. These field offices were to be used at generating stations, distribution line project locations, and forestry project locations and were needed immediately.

Solution

Williams Scotsman, who has successfully completed projects of this nature with Hydro One Networks before, was selected to provide these field offices. Initially, a total of 25 custom built wheeled units were supplied to various locations, totaling 9,970 sq. ft. of space. These newly built, custom units were metal sided and equipped with security packages on both the doors and windows. Double doors were constructed on the rear to allow for easy storage of equipment when needed. Aluminum steps were also provided.

Result

Within one month Williams Scotsman was able to deliver and install the field offices for Hydro One Networks. To date, Williams Scotsman has provided almost 75 of these custom units to Hydro One.

Milestones

Project Awarded: **November 2011**

Completed: **December 2011**
